Subject Index

Aerodynamic drag 29-38,39-49
Airspring suspensions, passive 103-117
Airspring suspensions, semi-active 103-117
Algorithm, thermomechanical 51-61

Ballast dynamic response 95-101
Bearing surface temperature 51-61
Bogie wheelset track dynamic interaction 11-20
Brake pad design, disc 51-61

Car lateral vibration, tail 87-93
Clearance swept envelope 63-71
Collision behaviour 73-85
Conicity 1-9
Contact mechanics, rolling 11-20
Control theory, optimal 103-117
Corrugation growth, railhead 11-20
Crashworthiness 73-85
Crossings 1-9

Dampers, longitudinal 87-93
Dampers, semi-active 103-117
Derailment, flange climb 1-9
Design, disc brake pad 51-61
Disc brake pad design 51-61
Drag, aerodynamic 29-38
Drag coefficients 29-38
Dynamic interaction, track bogie wheelset 11-20
Dynamic response, ballast 95-101
Dynamics simulation, vehicle 87-93

Electromagnetic compatibility 21-27
Envelope, clearance swept 63-71

Facing switches 1-9
Finite element analysis 73-85
Finite element model, three-dimensional 95-101
Finite element model, two-dimensional 51-61
Flange climb derailment 1-9
Friction, train surface skin 39-49

Gauging, structure 63-71
Gauging, UIC 63-71
Guidance, tread 1-9
Guidance, wheelset 1-9

High-speed trains 29-38,39-49,87-93

Input-output isolation 21-27
Isolation, input-output 21-27

Kinematic envelopes 63-71

Lateral vibration, tail car 87-93
Longitudinal dampers 87-93

Mathematical model 103-117
Model, mathematical 103-117
Model, quarter-vehicle 103-117
Model, three-dimensional finite element 95-101
Model, two-dimensional finite element 51-61

Optimal control theory 103-117
Over-ride testing 73-85

Pad design, disc brake 51-61
Passive airspring suspensions 103-117
Power supply reliability, switched mode 21-27
Pressure losses, stagnation 39-49
Pressure waves 29-38
Profile wear 1-9

Quarter-vehicle model 103-117

Railhead corrugation growth 11-20
Railway tunnels 29-38,39-49
Rakes, vehicle 73-85
Reliability, switched mode power supply 21-27
Rolling contact mechanics 11-20
Running tests 87-93

Semi-active airspring suspensions 103-117
Semi-active dampers 103-117
Shinkansen train 87-93
Simulation, vehicle dynamics 87-93
Skin friction, train surface 39-49
Stagnation pressure losses 39-49
Structure gauging 63-71
Surface skin friction, train 39-49
Surface temperature, bearing 51-61
Suspensions, passive airspring 103-117
Suspensions, semi-active airspring 103-117
Sway testing 63-71
Swept envelope, clearance 63-71
Switched mode power supply reliability 21-27
Switches, facing 1-9

Tail car lateral vibration 87-93
Temperature, bearing surface 51-61
Thermomechanical algorithm 51-61
Three-dimensional finite element model 95-101
Track bogie wheelset dynamic interaction 11-20
Track irregularity 95-101
Track wear 11-20
Train, Shinkansen 87-93
Train surface skin friction 39-49
Trains, high-speed 29-38,39-49,87-93
Tread guidance 1-9
Tunnels, railway 29-38,39-49
Two-dimensional finite element model 51-61

UIC gauging 63-71

VAMPIRE software program 103-117
Vehicle dynamics simulation 87-93
Vehicle rakes 73-85
Velocity 95-101

© IMechE 1996

Vibration, tail car lateral 87-93
Vibration propagation 95-101

Waves, pressure 29-38
Wear, profile 1-9
Wear, track 11-20
Wear, wheel 1-9
Wheel wear 1-9
Wheelset dynamic interaction, track bogie 11-20
Wheelset guidance 1-9
